

### **Project Description:**

As part of the 10 Days Visualization Challenge, you need to create a storytelling dashboard in the Horticulture sector.

**Author:** Sudhanshu Pandey

**Tool Used:** Tableau

## **Challenge Theme:-**Horticulture

**Dataset Url:-**<https://data.gov.in/node/95670/download>

**Git repo link:-**

<https://github.com/smartinternz02/SPS-11250-Horticulture>

### **1.What is Horticulture?**

Horticulture is the art of cultivating plants in gardens to produce food and medicinal ingredients, or for comfort and ornamental purposes. Horticulturists grow flowers, fruits and nuts, vegetables and herbs, as well as ornamental trees and lawns.

## **2.Overview**

The data refers to number of horticultural crops varieties released on national level during 1951-2009. The horticultural crops includes varieties released from vegetables, fruits, ornamental, medicinal and aromatic, plantation and spice crops.

Source: Division of Horticulture, Indian Council of Agricultural Research, New Delhi.

## **3.Objective**

To visualize the:-

- No of crop varieties released crop group wise
- No of crop varieties released crop wise in each group
- No of crop varieties released in each improved categories (Hybrid, Mutant, Selection and others)

## **4.Crop Improvement: Development and release of clones /varieties and hybrids in:-**

**4.1.Fruit Crops:** 134 varieties in 18 fruit crops comprising of Almond (4), Aonla (1), Apple (17), Apricot (3), Banana (4), Ber (3), Grapes (21), Guava (8), Khejri (1), Litchi (6), Mango (27), Papaya (19), Peach (1), Pear (3), Plum (2), Pomegranate (10), Sweet Orange (2) and Walnut (2) in which 70 varieties are belong to Hybrids, 4 varieties belong to Mutants, 50 varieties belong to Selections and 10 varieties belong to other category.

Total number of fruit crops released during 1951-2009: 134

## 4.2.Medicinal and Aromatic plants: 41 varieties in 23

Medicinal and Aromatic plants comprising of Asalio (1), Ashwagandha (2), Betel Vine (5), Foxglove (1), Isabgol (6), Jasminum Grandiflo (1), Lemon Grass (1), Liquorice (1), Long Pepper (1), Mucuna (1), Mushakbala (1),Opium Poppy (6), Palmarosa (2), Periwinkle (1), S Viarum (2), Safed Musli (1), Sarpagandha (1), Senna (1), Solanum Laciniatum (1), Spear McInt (1), Vetiver (1), Yam(2) and Yellow Horned Puppy (1) in which 2 varieties belong to Mutants, 24 varieties belong to Selections and 15 varieties belong to other category. There is no hybrid varieties in this group.

Total number of fruit crops released during 1951-2009: 41

## 5. Visualization of no of crop varieties released in each improved categories (Hybrid, Mutant, Selection and others)

## 6. Visualization of no of crop varieties released crop group wise

## 8.Application

- **R&D Sector:** Will help to analyse more those sector which is having less improvement done in previous year.
- **Farming Sector:** Farmer will able to grow crops which does not belong to their climatic region.
- **Reduce cost of crop.**
- **Increase Production.**
- **Reduce cost production time.**

## 9.Conclusion

Systematic research efforts over the years have led to the development of 1086 improved varieties and hybrids, improved production and protection technologies for different horticultural crops for varying agro-climatic regions and situations of the country as well as post harvest processing.

## 10.Future Scope

- You can insert sum so that we can calculate percentage of all the crop groups and various improved categories.
- You can visualize more attractive.
